PROFESSIONAL SUMMARY

I am a **MERN DEVELOPER** started my journey in 2020. I have a proven track record of developing highly interactive, user-friendly, and visually appealing websites. I am highly skilled in using **HTML, CSS, JavaScript, JQuery, React.js, MERN Technology, Wordpress** and other related technologies to create responsive and optimized websites that run on all major browsers. I have created rest api using express for ecommerce website, jwt token, handling refresh token, creating middlewares, handling errors, clean code and developed highly optimized react website.

EXPERIENCE

Web developer

fiverr / pakistan, nawabshah

2021 - 2023

At Fiverr, Pakistan, I worked as a web Developer for two years. During my tenure, I was responsible for developing user interface designs, implementing them into web applications and ensuring their functionality and efficiency. Additionally, I was in charge of creating new features and maintaining the existing ones. My job included:

- Writing clean, maintainable code
- Developing frontend applications using ReactJS
- Optimizing existing components for better performance
- Creating modern user interfaces with the latest trends and technologies
- Troubleshooting bugs, debugging issues and resolving them in a timely manner
- Collaborating with other teams to develop innovative solutions

EDUCATION

Bachelor of Science (BS)

Mehran University of Engineering & Technology, Pakistan, Jamshoro

2019 - 2023

I have completed my computer science degree recently in November, I have study multiple subjects i.e blockchain, SQL, Data science, Web Technologies, Networking and many more..

mongodb

PROJECTS

Projects

Pakistan, Nawabshah

2020 - 2024

I have done many projects some of these are:

- **Integration of charmatric api** in react website. **functionalities:** "getting refresh token, handling large data and filtering specific data from api".
- **Payslip Management System:** design complete payment system for usa client. Functionalities: HR or Admin can create payment slip and automatically send to their employees, employees have records of their payments, employees can ask for changes in payment, automation suggestion of employees while choosing from department and positions.
- **Coupon website for wordpress:** client asked to design custom website with landing page and coupon discount page where user can copy coupons to get discount and can go through link.
- **CheckedIN App UX designing:** i recently create ux design using react native almost 10 pages app, it's was social app and user can create post and share locations and recommendations.
- **INote Web app:** design and developed complete notes web app using MERN technology where user can authenticate with their credentials and create own notes on cloud and can edit or delete the notes

I also worked with other technologies for learning purpose i.e Flutter ,MERN, java, c++.
